

Summer Math Assignment for

2nd grade

Dear Parents,

Attached you will find a list of math activities that your child should complete this summer to better prepare them for the second grade. Each activity is a review from what your child has learned this year in first grade. Some problems may require that a parent sign off on the activity to confirm that your child completed it. The only required problems to be turned in are the problems attached to this packet. Please practice these skills with your child often in order to develop math fluency for success in the second grade. Feel welcome to expand upon these skills and create wonderful math learning moments together. Have a wonderful summer!
